LOCAL LLM

AI context brief

The International Monetary Fund (IMF) is urging more support for countries affected by the war. The concern is that the war may lead to more economic shocks, and therefore, more need for financial assistance. One potential risk is that the increased demand for financial support could lead to inflation, which could have a negative impact on the economy.

A Machine learning

TF-IDF features + Multinomial Naive Bayes trained on labeled examples.

B Local language model

Ollama generates a concise explanation; it does not replace the classifier.

C Decision support only

Sentiment is not a stock forecast or a recommendation to trade.
